

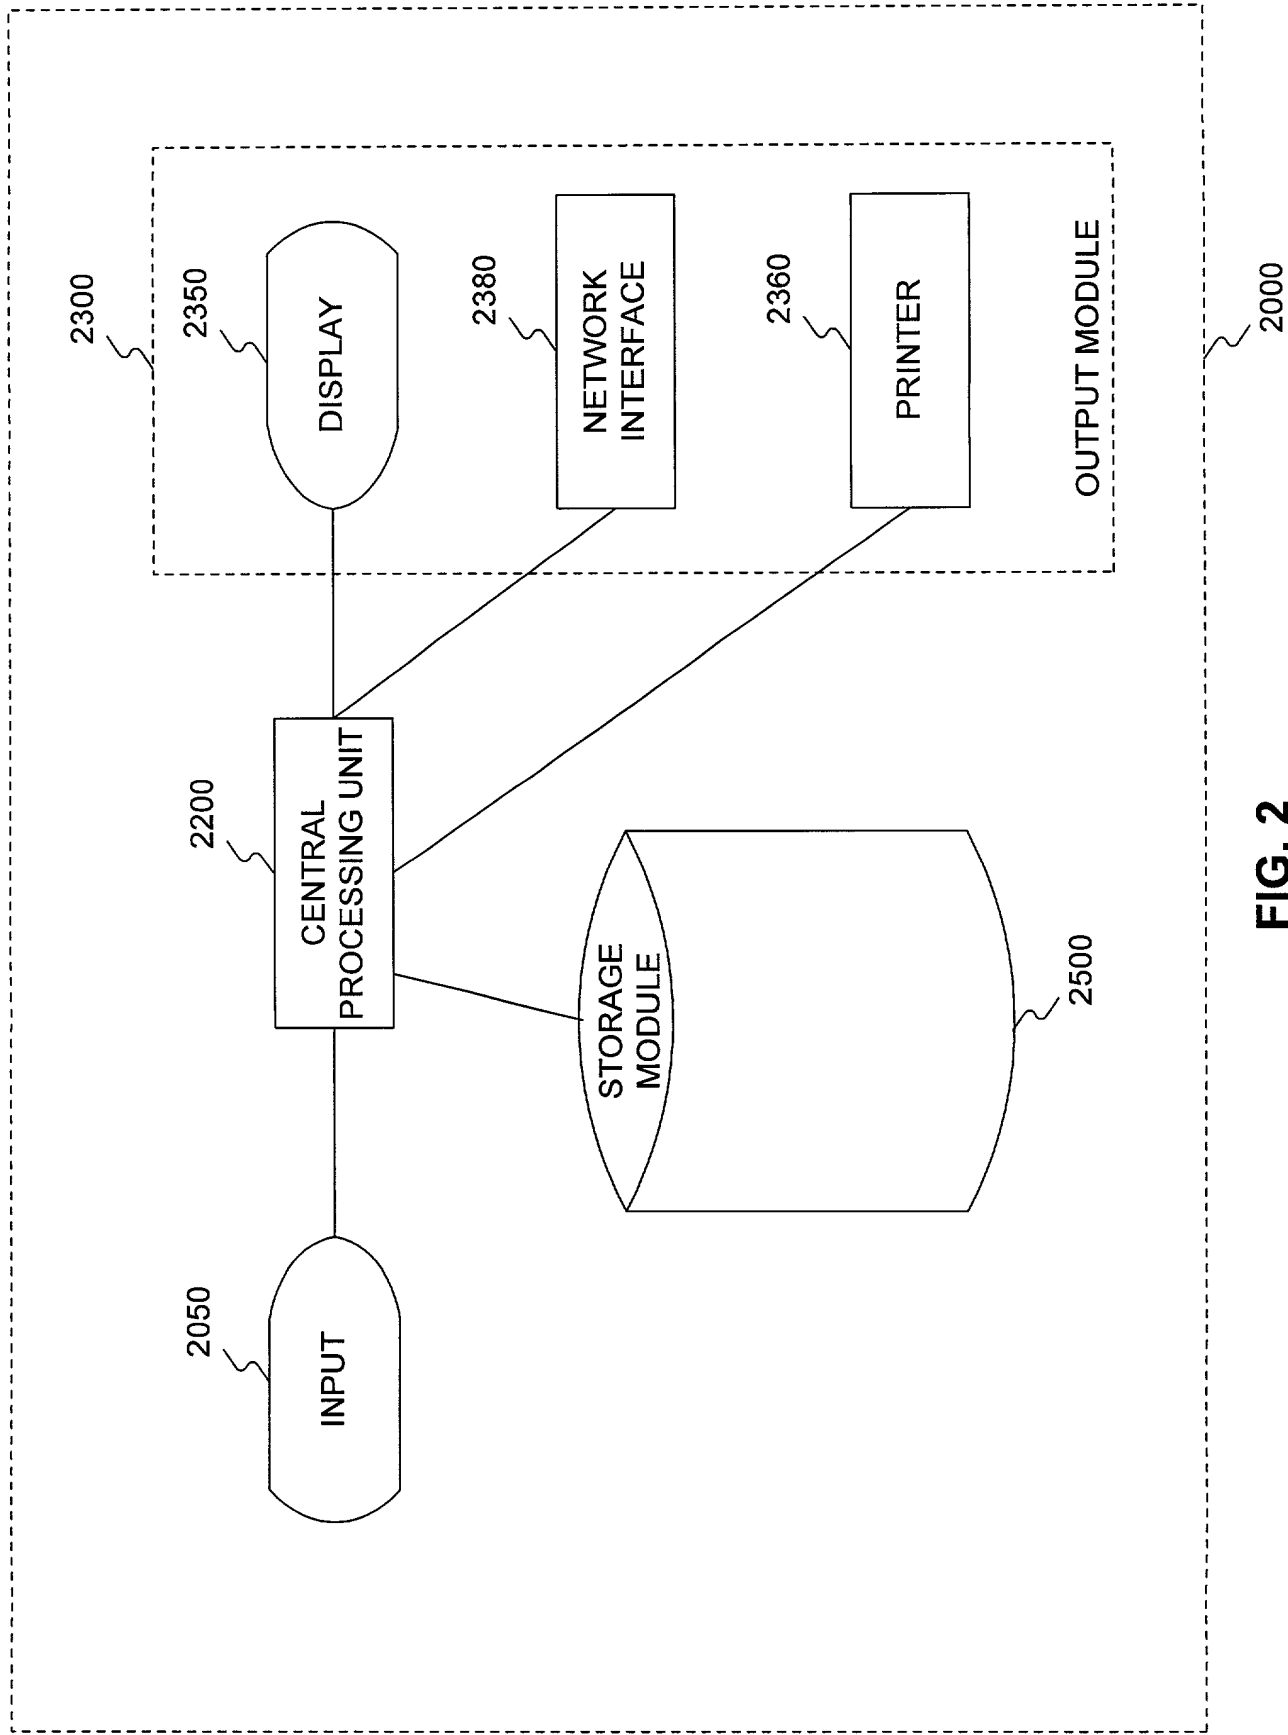

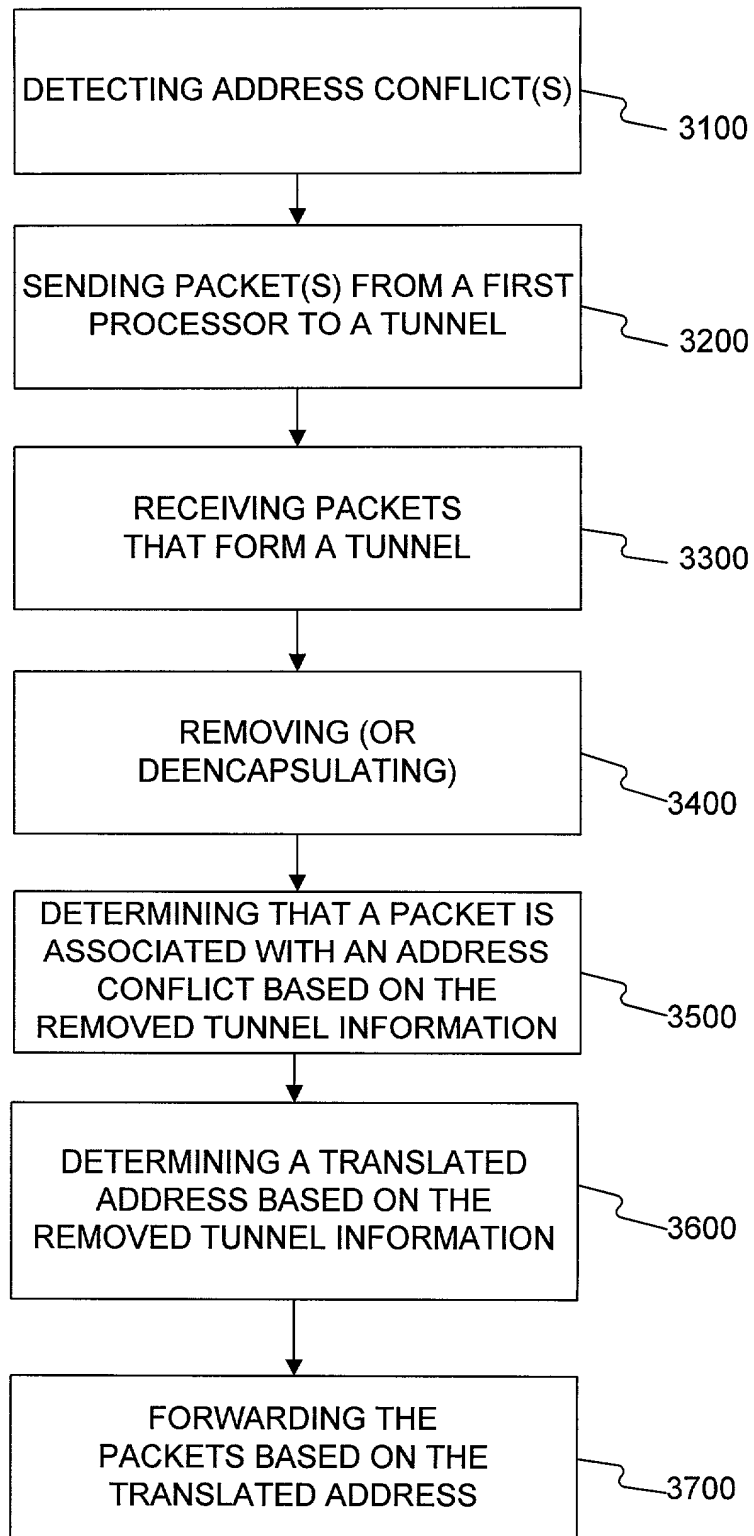

**FIG. 1**

FIG. 2 is a block diagram of a system 2000. The system 2000 includes an input 2050, a central processing unit 2200, a storage module 2500, and an output module 2300. The input 2050 is connected to the central processing unit 2200. The central processing unit 2200 is connected to the storage module 2500 and the output module 2300. The output module 2300 includes a display 2350, a network interface 2380, and a printer 2360.

FIG. 5

FIG. 6 is a schematic diagram of a network system 6000. The system includes a first network 1180 and a second network 1170. The first network 1180 is connected to a first gateway 1500, which imports packets from a second network 198. The second network 1170 is connected to a second gateway 1510, which exports packets to a second network 172. A tunnel 1186 connects the first gateway 1500 and the second gateway 1510. The first gateway 1500 is associated with the address "172.16.1.2" and the first network 1180 is associated with the address range "172.16.1.1-255". The second gateway 1510 is associated with the address "172.16.2.2" and the second network 1170 is associated with the address range "172.16.2.1-255".
